

# BOLSTER EMERGENCY RESILIENCE

## FEATURE OVERVIEW

The intent of this feature is to **enable individuals and communities to maintain health and well-being and organizations to maintain business function, during and after emergencies.**

A wide variety of emergencies, from biological events, winter storms and tornadoes to active shooters or terrorist attacks, may necessitate sheltering in place. Infectious disease pandemics can cause extended business shutdowns, while employees who continue working may be forced to work in high-risk conditions or in remote spaces not equipped to support productivity. Finally, studies show the capacity of hospital facilities decreases significantly in the aftermath of natural disasters, potentially forcing them to ration resources and outsource healthcare workers.

## HIGHLIGHTS OF WHAT WE'VE DONE

### COMMITMENT TO COMMUNITY

We are committed to helping occupants of our building and individuals of our neighboring community stay safe during and after emergencies.

### AVAILABLE DURING EMERGENCIES

We designate parts of our building for emergency responders or other equivalent institutions to use during and immediately following emergencies at no cost.

### AVAILABLE FOLLOWING EMERGENCIES

For prolonged events, we will provide the same resources to the appropriate individuals or organizations as warranted by the emergency event.

## BENEFITS

Designating space for emergency public use can reduce the burden on medical facilities during critical events such as natural disasters and pandemics and help patients receive immediate care.
