

The Alliance Center is a WELL Health-Safety rated building. This guide is one part of a 21 part series highlighting the various features our facility accomplishes to make it a healthier and safer place for our occupants and visitors.

MONITOR AIR AND WATER QUALITY

FEATURE OVERVIEW

The intent of this feature is to **assess indoor air quality and water quality, which contribute to the health and wellbeing of building users.**

Exposure to air pollutants have been shown to increase the risk of respiratory and cardiovascular diseases in addition to causing thousands of cancer deaths annually. All water systems require some degree of validation to ensure that health targets are met under their operational conditions.

HIGHLIGHTS OF WHAT WE'VE DONE

TEST AIR QUALITY ANNUALLY

We test our building's air for particulate matter, total volatile organic compounds, ozone and carbon monoxide at least once a year.

TEST WATER QUALITY ANNUALLY

At The Alliance Center, we test our building's water for turbidity, pH, residual chlorine and total coliforms at least once a year.

MONITOR AIR QUALITY REGULARLY

We monitor air quality throughout all tenant spaces on an ongoing basis.

BENEFITS

Monitoring air and water quality validates that these resources are provided at levels established by the EPA. It also helps identify when/if areas of concern arise and provides information when action is needed.
